Understanding our Project and Introducing Axios

Transcription | Description

Attached to this lecture here, you will find the starting project, you can see here. I just started it with npm start. It uses create react project. I didn't edit it to use css modules, instead I just import css files so that they affect the project globally but that doesn't pose an issue here and I got a couple of containers or one container and a couple of components. As you can see at the example of the FullPost component here, which is responsible for rendering this part here. Now I do have class based components here as components because I will add some state and lifecycle methods here. Now of course,
